AVAILABILITY: By e-mail; before/after class; by mutually convenient appointment.

COURSE DESCRIPTION: This course analyzes responses to international conflict and approaches to establishing peace and peacekeeping at the local, national, and global levels to include theoretical constructs about conflict management techniques (mediation, negotiation, escalation, de-escalation, termination, and outcomes).

OVERALL OBJECTIVE: This course emphasizes how rational and strategic underpinnings dictate the course of international interactions. Rational and game-theoretical modeling is used to give a greater understanding of these mechanisms, and to identify problems often associated with collective action of this kind. Conflict is an inevitable outcome of interaction between actors with competing hierarchies of preferred outcomes, particularly in the international context where there is no overarching authority to help resolve collective actions problems and reconcile conflicting interests. Nevertheless, both theoretical and practical measures have been developed in order to structure the decision-making environment of rational actors and thereby manage the worst manifestations of international conflict. Upon completion of IR 6655, the student should understand the theoretical and practical methods of implementation of conflict management techniques.

SPECIFIC OBJECTIVES: Upon completion of the course, the student should be able to demonstrate an understanding of:

1. Conceptual frameworks for analyzing conflicts;
2. An understanding of problems prevalent in the international arena;
3. A broader repertoire of negotiation strategies and skills;
4. A deeper understanding of how to work with conflict;
5. Confidence in their own negotiating, presentation and strategic interaction skills;
6. Improved analytical and research skills;
7. Improved oral and written communication skills;
8. Confidence in their ability to convey an understanding of the complex forces shaping contemporary international conflict.
